Garden room

A room you will need...

Have you thought about an additional family lounge in the garden, a calm space without actually leaving the house or a recreation zone, such as a home gym or music studio?

Manufacturers and installers of buildings made from plastic waste.

Garden studio

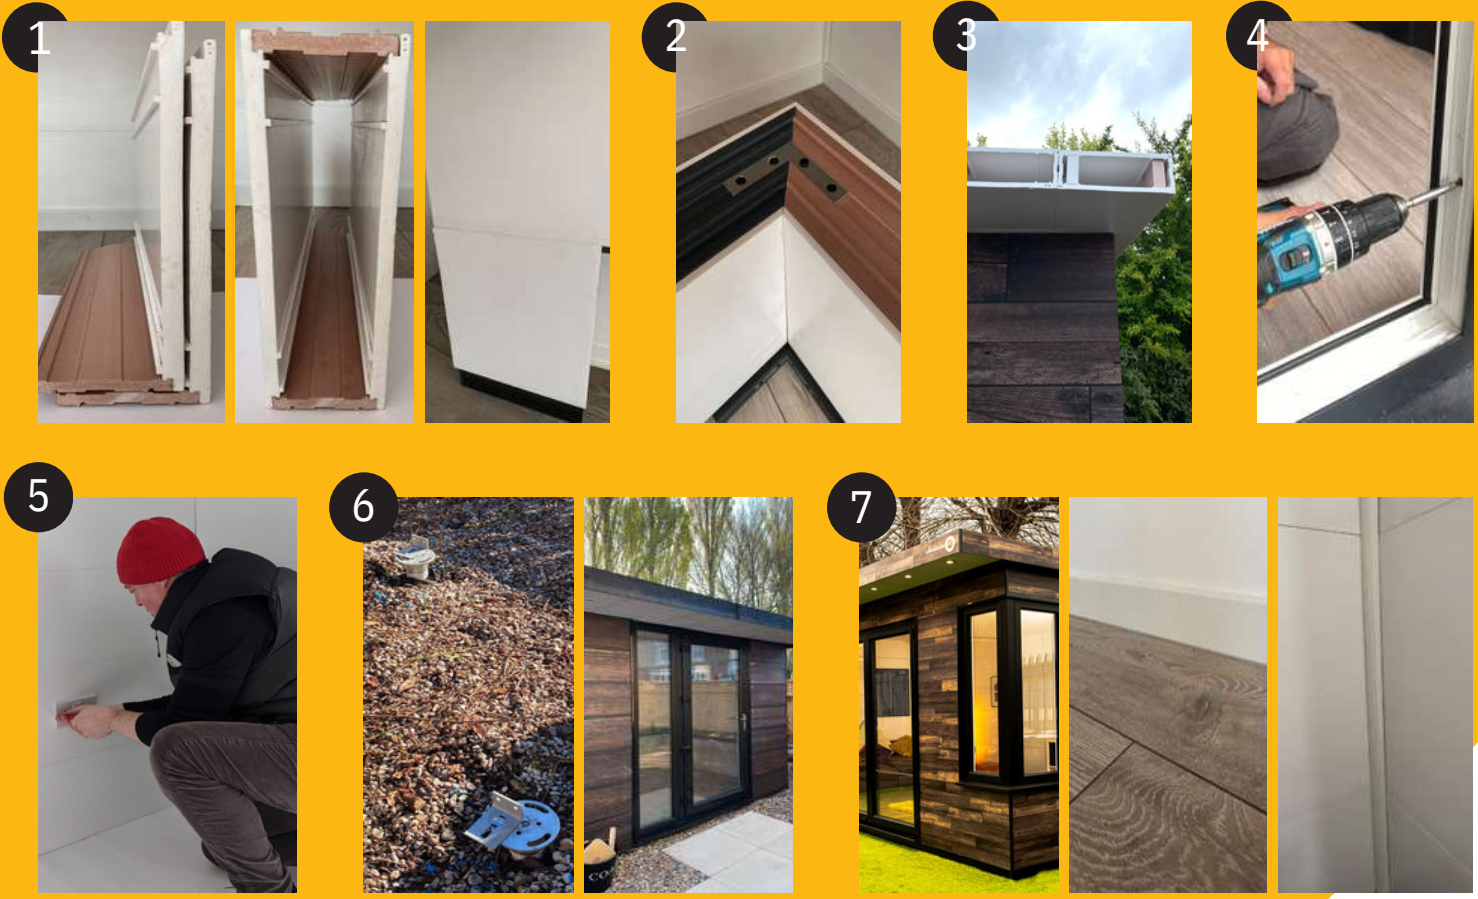

Your new home office...

What if there was a way of having the office experience without the physical and financial cost of commuting?

Imagine if you could have all the advantages of a dedicated workspace close to home, just not in the house?

The wait is over...

1. Basic system

The ogel wall is built by putting two 'L' shaped profiles together to form a block shape, which is then stacked to construct a wall.

2. Corners

45 degree joints are screwed together to form a corner.

3. Roof

The roof uses the same construction method as the wall, but is built horizontally rather than vertically. A membrane is added to waterproof the building.

4. Doors and windows

Doors and windows are attached conventionally by screwing through the frame into the ogel wall.

5. Electrics and plumbing

Cables and pipework are run through the wall cavity, enabling flush mounted sockets, switches and lighting to be used.

6. Ground conditions

Ogel buildings can be sited on most surfaces... for example: ground screws, paving slabs or concrete pads. Adjustable feet in the foundation enable accurate levelling.

7. Finishing touches

These can include vinyl wrapping, laminate flooring and underfloor heating, as well as desk and shelving installation.

The final product...

We spoke to Leanne, who recently purchased an ogel garden room...

Why did you choose ogel?

“I liked being able to choose my own dimensions and vinyl covering design. I also liked that the pod can be taken with me if I move house, and the fact that the ogel pod doesn't require any maintenance

was a big selling point for me. I also liked the green credentials of the ogel pods as they are constructed with recycled plastic.”

Why did you decide to get a garden room?

“My partner and I both currently work in jobs where we work from home for a significant proportion of the time. We didn't have sufficient space in our house to have a separate office. This meant that I was working at the dining table most days or travelling to my parent's house to use their office.”
